More than 500 Millers Falls Customers have purchased our new Electric Drill since May—

—only five months

OUR new ¼" electric drill placed on the market in May of this year has been a phenomenal success. Many of our customers who have not stocked electric drills heretofore have found for the first time that there is a market for this sort of a tool. Electric drills are an indication of progress and will be more in demand year by year. Any dealer or jobber who has sold Millers Falls hand and breast drills can sell Millers Falls electric drills.

We have been favored with many repeat orders for this drill. And best of all, many favorable comments have been made from consumers regarding the exceptional performance of this well made tool. Later on we shall add other sizes. It will be for your advantage to get started right now with the ¼".
